

# Skudo3

## LIQUID CLEANER

For heating and cooling systems

PRODUCT FOR PROFESSIONAL USE

### 1 DESCRIPTION

Dissolves sludge from oxides and encrustations, removes iron deposits, limescale, and oxides from heat exchangers, radiators, and heating system pipes, making flushing operations faster and easier. Can be used with a system cleaning pump or existing circulation pumps.

### 2 INSTRUCTIONS FOR USE

Use 1 liter of product per 100 liters of circulating water. If the system is heavily contaminated, the dose can be doubled. Inject the product into the water using a dosing pump, bypass, or radiator valve. Ensure that all radiator valves are fully open to allow the solution to circulate throughout the system for at least 72 hours. Once completed, drain the system and rinse until the water runs clear. Make sure conductivity parameters are within the standard range. Refill the system with water and Skudo1 to protect it from potential corrosion.

### 3 PACKAGING

1L bottle  
 25L tank
