

Skudo7

LIQUID BIOCIDO

For heating and cooling systems

PRODUCT FOR PROFESSIONAL USE

1 DESCRIPTION

Skudo7 eliminates and prevents the proliferation of algae, bacteria, and fungi. It combats the growth of microorganisms in residential heating systems, including traditional radiator systems and low-temperature radiant panel systems.

It prevents the formation of sludge and biofilms, which reduce heat exchange efficiency and can clog pipes and pumps, ensuring optimal thermal performance of the system. Suitable for water of any hardness.

2 INSTRUCTIONS FOR USE

For system cleaning: Inject 1L of Skudo7 per 100L of water using an external circulation pump and let it circulate for a period of 3 to 15 days maximum.

For system protection: Inject 1L of Skudo7 per 100L of water permanently using a circulation pump. If used in combination with Skudo1, inject 500ml of Skudo7 per 100L of water.

DO NOT ADD OTHER PRODUCTS SIMULTANEOUSLY.
